

Dorgard Pro

Problems with wedged open fire doors?

Dorgard Pro is a fire door retainer that holds fire doors open legally, releasing them to close upon alarm activation. The Dorgard Pro units are radio-activated by ProHub, which connects to your existing fire system.

Benefits

Easily check all units remotely with Site Manager

Can even be fitted to heavy doors

Controlled by ProHub, not affected by background noise

Works in zonal setups and phased evacuation

Carpet friendly

Peace of mind with a two-year warranty

Dorgard Pro

Dorgard Pro is radio-controlled by ProHub which is connected directly to your fire system. This makes it suitable for high-risk areas.

ProHub has the optional add-on for InSite, our monitoring software. You'll be able to see your whole Pro system status from your internet device!

Dorgard Pro is an expandable system, so you can add new units when you need to.

“ Working with Fireco has been great, from the planning stage, where we had a very thorough visit from Jason the Engineer, to the install, which was really smooth and fast. Dorgard Pro has proved easy to use and given us peace of mind that there's less to maintain on a day to day basis. ”

Paul Musselwhite, Managing Director at Komedia Arts Venue

“ The school is now able to have all fire doors open or closed as desired, without compromising Health & Safety and Fire Regulations. ”

Pete Murray, MIET Electrical Engineer
